Creating an Innovative Ecosystem: Role of Industry, Academia, Government, Service Providers and others (Panel Discussion):

Lifesciences today faces multiple challenges in the form of dying research pipeline, increasing cost of drugs & increasing monetary pressures on government. The quality of academic research output in India is improving, however it is lagging behind other significant Asian countries because of lack of facilities for collaboration, coordination, common platform to interact with industry & history of large focus on publications than patents/commercialization of technology. With accessibility & affordability of quality medicines being a priority for an economy, it is imperative that all stakeholders in the lifesciences domain collaborate to create an ecosystem that encourages innovation while factoring in the needs of the larger population.
